

AMENDMENTS TO THE CLAIMS

1-51. (Cancelled)

52. (Currently Amended): A method for fabricating a stereoscopic display device, comprising:
preparing a display panel having first and second pixels for displaying left-eye and right-eye image information, respectively; and

forming a polarizer on the display panel;

forming an adhesive layer on the polarizer;

forming a transparent substrate on the adhesive layer;

forming a retardation layer on the transparent substrate without an alignment layer between the retardation layer and the transparent substrate, the retardation layer including a chiral dopant with a predetermined pitch;

forming [[having]] first and second polarizing cell areas in the retardation layer corresponding to the first and second pixels over the display panel by a single light irradiation through a mask; and, the first and second polarizing cell areas outputting first and second linearly polarized lights, respectively, the first linearly polarized light being substantially perpendicular to the second linearly polarized light

mounting the retardation layer on the transparent substrate to the display panel.

53. (Previously Presented): The method according to claim 52, further comprising polymerizing the retardation layer by irradiating a light.

54. (Previously Presented): The method according to claim 52, wherein the display panel is a liquid crystal display (LCD) panel.

55. (Currently Amended): The method according to claim 54, wherein ~~a polarizer is provided between the LCD panel and the retardation layer~~, the polarizer integrally formed with the retardation layer.

56. (Cancelled)

57. (Currently Amended): The method according to claim 52 ~~[[56]]~~, wherein the transparent substrate includes a solvent-proof polymer.

58. (Cancelled)

59. (Previously Presented): The method according to claim 53, wherein the first and second polarizing cell areas are arranged in alternating lines.

60. (Previously Presented): The method according to claim 53, wherein the first and second polarizing cell areas are arranged in a checkered pattern.

61. (Previously Presented): The method according to claim 53, wherein the retardation layer is covered with a protecting polymer.

62. (Previously Presented): The method according to claim 52, wherein forming the retardation layer having first and second polarizing cell areas does not include removing a portion of the retardation layer.
